Setup:Installation Manual/Security Settings/Deactivating installcheck file

A quality version of this page, approved on *31 July 2017*, was based off this revision.

Contents

As soon as the setup of BlueSpice is completed, you should prevent the execution of the
installcheck.php while using the wiki productively.
A short instruction can be found in this document.

Tips for this Document

- Please, read this manual completely and work through the single installation steps one after another.
- For editing the configuration files with a text editor, the files must be saved in UTF-8 coding without
  BOM (Byte Order Mark).
- The placeholder `<installpath-bluespice>` stands for the path to your BlueSpice installation, e.g `C:
  \inetpub\wwwroot\bluespice` (Windows) or `/var/www/bluespice` (Linux).

Deactivating installcheck.php

Switch to the directory `<installpath-bluespice>` and open the `installcheck.php` file in a
text editor. Insert a new line after the first line and insert

```
die( 'Deactivated.' );
```

Save and exit the file. The installcheck.php is no longer accessible now.
If you need to restore this file at a later time, it is sufficient to temporarily disable inserted line by
placing the # character at the beginning of the line.
