BlueSpice free local testing

This document describes the steps for the installation of MediaWiki 1.27.3 and BlueSpice 2.27.2 (or 2.27.1) with installer **on your local Windows computer**. This allows you to take a look at the system and test the features.

For the Installation of a productive system please follow the genereal [wiki/Setup:Installation_Manual installation manual.]

Introduction

BlueSpice is a wiki software.

BlueSpice is used worldwide as a platform for collaborative knowledge management, as a knowledge base in customer support and as an uncomplicated tool for documentation and handbooks.

BlueSpice is mostly used as:

- a central company wiki,
- a technical documentation platform,
- a quality handbook,
- knowledge management platform,
- documentation tool for research and development.

Add user-friendly extensions to MediaWiki and make your administrators' lives easier.

Step one: Install XAMPP

To install BlueSpice with installer you need:

- a Webserver,
- PHP,
- MySQL.

XAMPP contains all three.

Take notice that XAMPP should only be used for testing.

To download and install XAMPP click here .

The download will in the Chrome browser appear as small notification in the left corner at the end of the page. When download is finish you will get a notification in the corner, marked red as on this image:

\leftarrow \rightarrow C \odot https://	www.apachefriends.org/download_succ	cess.html							₽ ☆:

When you install XAMPP, you should start **Apache** and **MySql** so that they appear green like in this image:

In XAMPP by **Apache** click the button **Config**. Click on **PHP(php.ini)**. You should get:

After this **stop** and **start** your xampp again:

Step two: Install BlueSpice

Now, when we have XAMPP, download BlueSpice **here**. Download the version with intaller (red marked) as you see bellow:

Sicher https://bluespice.com	n/download-bluespice/			B _E

Create a new folder in **C:\xampp\htdocs**. You can choose any name you like, but it should contain only lettets, numbers, underscore or dash. The name of this folder will be referred to as **{name}** in later text. Copy the files from unziped folder (seen on the image above) to this newly created folder.

In some cases you might be asked: Do you want to merge? Answer **Yes**.

In C:\xampp\htdocs\{name} you find folder extensions in that folder is another folder BlueSpiceFoundation. Rename there data.template to data.

Rename: right click and on combo/dropdown list and click **Rename**.

Repeat this for **config.template** and rename it to **config**.

Look for the folder **cache** in your **{name}** folder, right click (Properties and Security) and check if **Everyone** have permissions like in the image below. If not: go to edit, add **Everyone** and **OK**.

Name	•	Date modified	Туре	Si
퉬 cache	1	4/6/2017 11:54 AM	File folder	
鷆 do	L ca	che Properties	×	
im inc Iar Iar ma mv res ser	Group or user names:	pice\bluespice_web\blue		
퉬 ski 🐌 tes 퉬 vei 📄 api	To change permissions, c	ш	Edit	
au co co CC CR	Full control Modify Read & execute List folder contents Read Write	****		
FA Ge Gri HI	For special permissions or click Advanced.	advanced settings,	Ad <u>v</u> anced	
im index	P11P	OK Cancel	Apply	

Do the same for folder **images** .

To check if all is ok, type in the browser: http://localhost/{name} You should get:

Continue by clicking **complete the installation** .

You should get:
