

# System Requirements

For a trouble-free installation of BlueSpice, we would kindly ask you to provide a server environment and accesses like listed below. It may cause additional effort, if the existing conditions differ from our standard requirements. In our offers, the effort is calculated for the standard. If differing conditions cause additional effort which exceed the standard calculation, it will be invoiced separately. In this case, we first consult you and charge – if you agree – the additional service hours.

## Browser

- Internet Explorer 10 or higher (without compatibility view)
- Microsoft Edge
- Google Chrome
- Firefox 38 or higher

## MediaWiki

- Version 1.27.x

## Server Environment

| System Requirements   | Discrepancy of Your Server Environment |
|---|--|
| Operating System:<br>Microsoft Windows Server 2008+ or<br>Linux (established distributions) |  |
| Web Server:<br>Apache 2+ or IIS 7+  |  |
| PHP 5.5.9+ ( <b>Attention:</b> not PHP 7)   |  |

|   |  |
|---|--|
| MySQL 5.4+ or MariaDB 10+                                       |  |
| Main Memory: > 4 GB<br>(depends on the usage)                   |  |
| Hard Drive: > 10 GB<br>(depends on the planned storage of data) |  |
| CPU: 2 GHz+<br>(Dual Core or higher recommended)                |  |
| Apache Tomcat 7+<br>(for extended search and PDF export)        |  |
| Java 8+   |  |

## Shall we set up your server?

We offer you our service for installation and configuration of the server environment (Webserver, PHP, MySQL, Apache Tomcat, Java). If you want to make use of this service, please contact:

[sales@bluespice.com](mailto:sales@bluespice.com)

We will send you an appropriate quotation!
